West Bengal

Professional Summary

AI & ML undergraduate who designs and ships full-stack applications end to end — from normalized relational schemas to production-ready Java, PHP, and JavaScript systems. Built and shipped four independent projects including a CRUD e-commerce platform, passport-size photo editor, mail generator, and real-time space-data explorer powered by the NASA API. Strong foundation in DSA, DBMS, and problem-solving, with experience taking features from database design through deployment.

Education

St. Thomas' College of Engineering and Technology	Expected 2027
B.Tech in Artificial Intelligence and Machine Learning	CGPA: 7.61
Ramakrishna Vivekananda Mission, Barrackpore	2023
Higher Secondary Examination	81.8%
Ramakrishna Vivekananda Mission, Barrackpore	2021
Secondary Examination	86.43%

Technical Skills

Languages: Java, C, Python
Backend & Database: PHP, JDBC, MySQL, Oracle
Web Technologies: HTML, CSS, JavaScript, Bootstrap, jQuery, AJAX
Machine Learning: Machine Learning, Deep Learning, Neural Networks
Core Subjects: Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA), Problem Solving

Projects

E-commerce Management	<i>Java, MySQL, JDBC</i>
- Developed a full CRUD e-commerce management system in Java using JDBC with a normalized MySQL schema for products, orders, and users. - Designed a modular OOP-based architecture separating data access, business logic, and UI layers for easier maintenance. GitHub: github.com/Krishna051104/e_commerce_management	
Mail Generator	<i>PHP, SMTP</i>
- Built a PHP-based mail generator that composes and sends emails through SMTP. - Separated mail generation and delivery logic into dedicated modules for a clean, maintainable codebase. GitHub: github.com/Krishna051104/mail_generator	
COSMEX – Space Explorer	<i>HTML, CSS, JavaScript, NASA API</i>
- Built a responsive web application that pulls and displays real-time space data through the NASA API. - Implemented dynamic JavaScript-driven UI updates so new data refreshes without a page reload. Live Demo: cosmex-space-explorer.netlify.app	
Passport Size Photo Editor	<i>HTML, CSS, JavaScript, Remove.bg API</i>
- Built a web-based tool for cropping and formatting photos to standard passport and ID sizes. - Integrated the Remove.bg API for automatic background removal on uploaded photos. GitHub: github.com/Krishna051104/Passport_size_photo_editor	

Certifications

- Java — PBA Institute
- DBMS — PBA Institute
- Web Design (HTML, CSS, JavaScript) — PBA Institute
- PHP, AJAX, Bootstrap, jQuery — PBA Institute
- Certificates:** Google Drive Certificate Folder

Co-curricular Activities

- Event Lead, AIML Department Farewell:** Jointly managed decoration and coordinated the awards ceremony.
- Volunteer, College Tech Fest**

Additional Information

Hobbies: Reading novels, motorbike riding

Languages: English, Bengali, Hindi
